February 12, 1980

TO: ALL CREW MEMBERS
FROM: MAR
SUBJ: NAVIGATION/CREW TRAINING

- a) Star identification session for all crew on Friday, February 15, 1980, 8:00 P.M., at the Bishop Museum Planetarium. (meet outside)
- b) Please study the enclosed star compass. Review and know the positions of the 30 stars shown on the compass.
- c) A crew training sail for all selected crew members is scheduled for 7:00 A.M. on Saturday, February 16, 1980. Meet at Pier 12 Honolulu, regardless of the weather conditions.

If you have any questions feel free to call me at the office 841-3966 or at home [REDACTED]

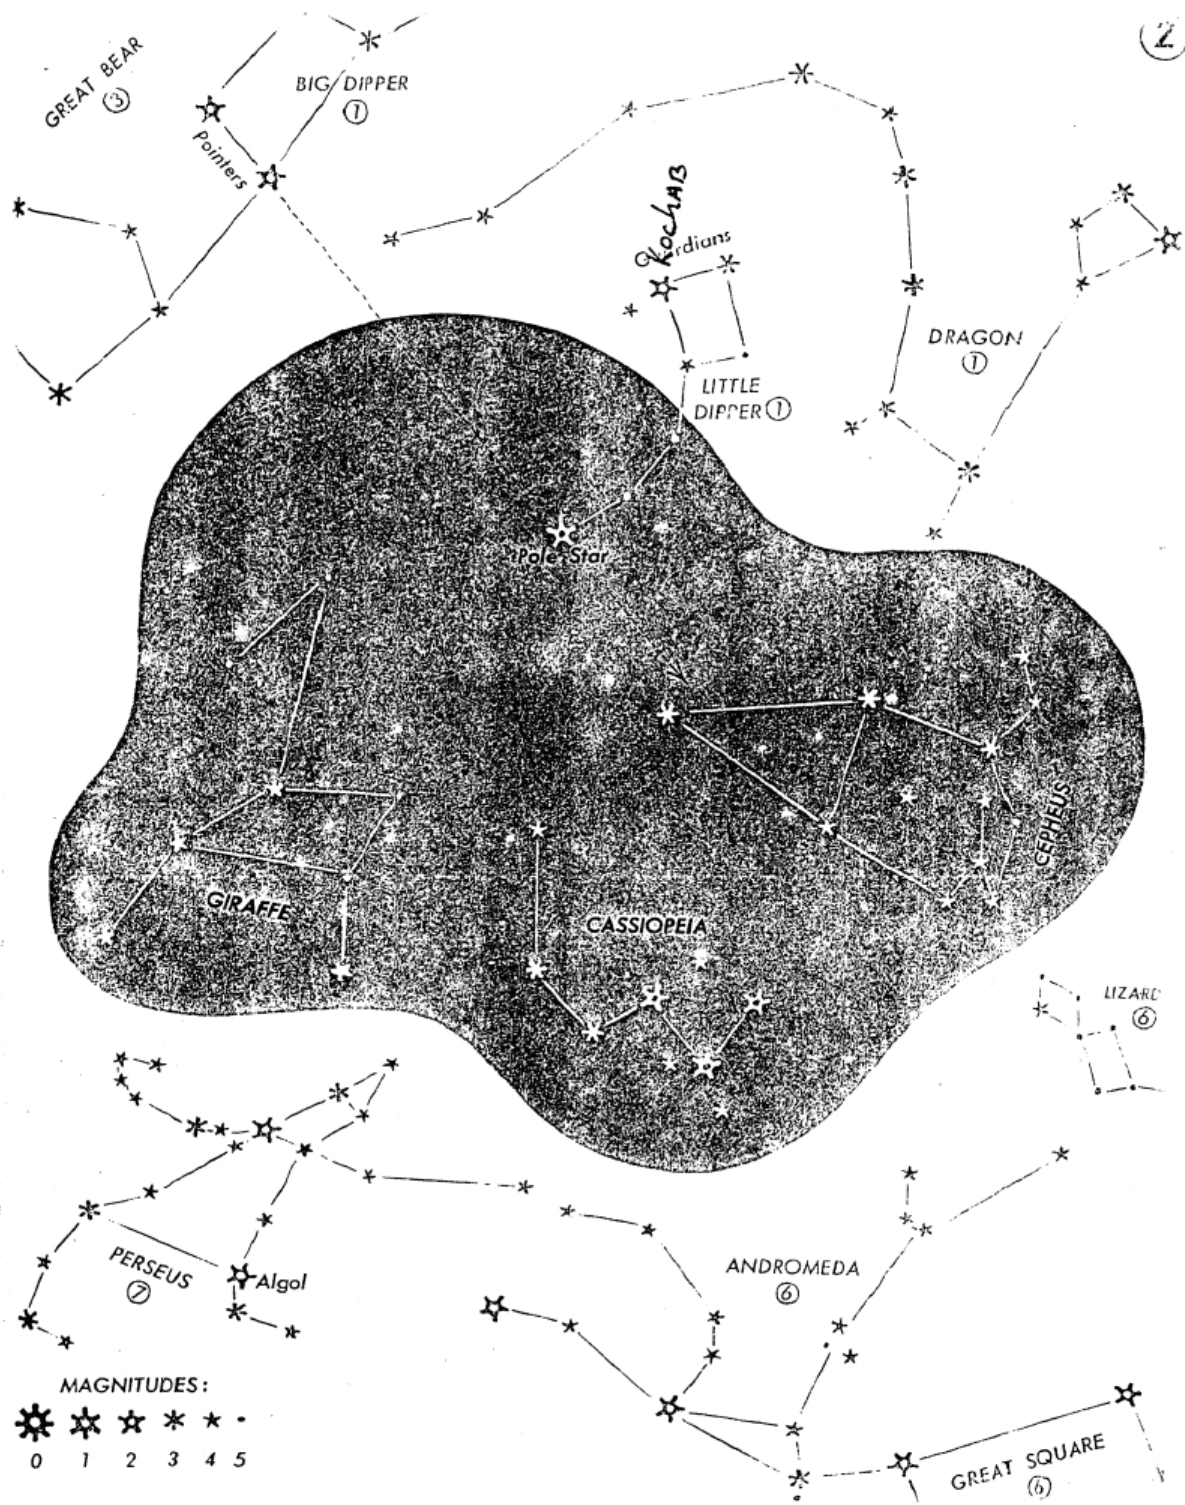

Mahalo.

March 12, 1979

TO: NAINOA THOMPSON
FROM: MAR
SUBJ: TENTATIVE SCHEDULE
March, April, May

Aloha Nainoa,

At your earliest convenience, could you please give me a tentative schedule for Hokule'a during March, April and May. I hope to facilitate better communication with the Board and committee members by putting together a calendar on the schedule for Hokule'a during these months. I am aware that sailing time is dependent on the weather, and I will indicate this.

Mahalo for your help and I wish you lots of luck on your training program. If you need help, call.

SUBJECT: PROGRESS REPORT
July 1 through July 15, 1978

A. ORGANIZAING A PLAN

A way of going about in an organized manner with the time available to learn about non-instrument navigation in specific terms of a round trip voyage between Hawaii and Tahiti, with the available resources.

B. PLANETARIUM SESSIONS

Meeting with Will Kyselka ten to twelve hours weekly at the planetarium. Discussing, re-researching and refining ideas, about the possible ways of non-instrument navigation.

Also needed was transcribing and documenting the research done at planetarium.

C. OBSERVATIONS OF THE HEAVENS

Day time observations - watching the sun's path at different time intervals,

Night time observations - Watching the stars, moon and planets in terms of their relationship with the research being done in the non-instrument navigation.

August 15, 1978

TO: Michael A. Tongg
FROM: Nainoa Thompson
SUBJECT: July 17 - August 1, 1978 Report

- A. Developing a plan to organize my studies
- B. Continued sessions at planetarium with Will Kyselka dealing with star paths. Sessions lasting two to three hours.
- C. Observations of heavens (on land) dealing with sessions at Planetarium.
- D. Working on reports:
 - 1. "Star Navigation"
 - 2. Kealaikahiki
- E. Worked on equipment needed for future navigation study

To Crew Candidates:

All crew must know the information given in compass:

stars
constellation
the cardinal direction they are in
paths of sun, moon, and planet

Extensive training in the use of this information in relation to navigation will be given to the final crew members. But the above information must be known by mid September

* It must be understood that the principle job of crew members in relation to navigation is to hold a steady course, this requires a certain amount of knowledge in terms of the usage of the Heaven: by night and the sun and the sea by day. The day navigation training will be done at sea on Hokulea.

Resources:

- 1) Books (list given)
- 2) Planetarium classes (5)
- 3) Night classes (2 to 4)
- 4) Will Kyselka, [REDACTED] Nainoa Thompson, [REDACTED], Steve Somsen, [REDACTED]

* (If in your own study you are having problems you can't solve call one of the above).

* Tentitive scheduled night class will be Saturday night June 30th (all night) location not yet decided.

June 20, 1979

TO: CREW CANDIDATES
FROM: MAR
SUBJ: NAVIGATION

The following are books that you will need to purchase for your study in navigation:

NORTHERN STAR TO SOUTHERN CROSS by Will Kyselka	\$ 4.95
FIND THE CONSTELLATIONS by H. E. Rey	3.95
THE STAR by H. E. Rey	5.95
STARS OVER HAWAII by E. H. Bryan	3.50
12 SKY MAPS FROM NORTHERN STAR TO SOUTHERN CROSS	<u>10.00</u>

TOTAL \$28.35

PROPOSED NONINSTRUMENTAL NAVIGATION
TRAINING PROGRAM

The crew members of Hokule'a need to know the principles and specifics of holding a particular course, set by the navigator. Such competency depends upon a knowledge of the stars as well as the ways of the sea.

Noninstrumental Celestial Navigation

Crew members will become familiar with the terms and concepts relating to the stars.

1. Sidereal compass and the rising and setting places of principal stars.
2. The sun, and its eastward movement among the stars of about one degree a day. The sun's apparent path on the celestial sphere (ecliptic)
3. Relationship of the sun and full moon in the sky relative to the ecliptic.
4. The planets and their motions among the stars and relationship to the ecliptic.
5. Changes in the sky due to daily, annual, and precessional motions.
6. Changes in the azimuths of rising and setting stars with a change in latitude.
7. Steering stars for March through July as well as the stars for backsighting.
8. The solar and sidereal day as well as the synodic and sidereal month.

PROPOSED NONINSTRUMENTAL NAVIGATION TRAINING PROGRAM (continued)

9. Major zenith stars of Polynesia.
10. Terms: celestial equator, declination, meridian.

Training

Training in the Planetarium and at sea as well as the knowledge to be gained through books will provide crew members the information they need to perform their steering tasks.

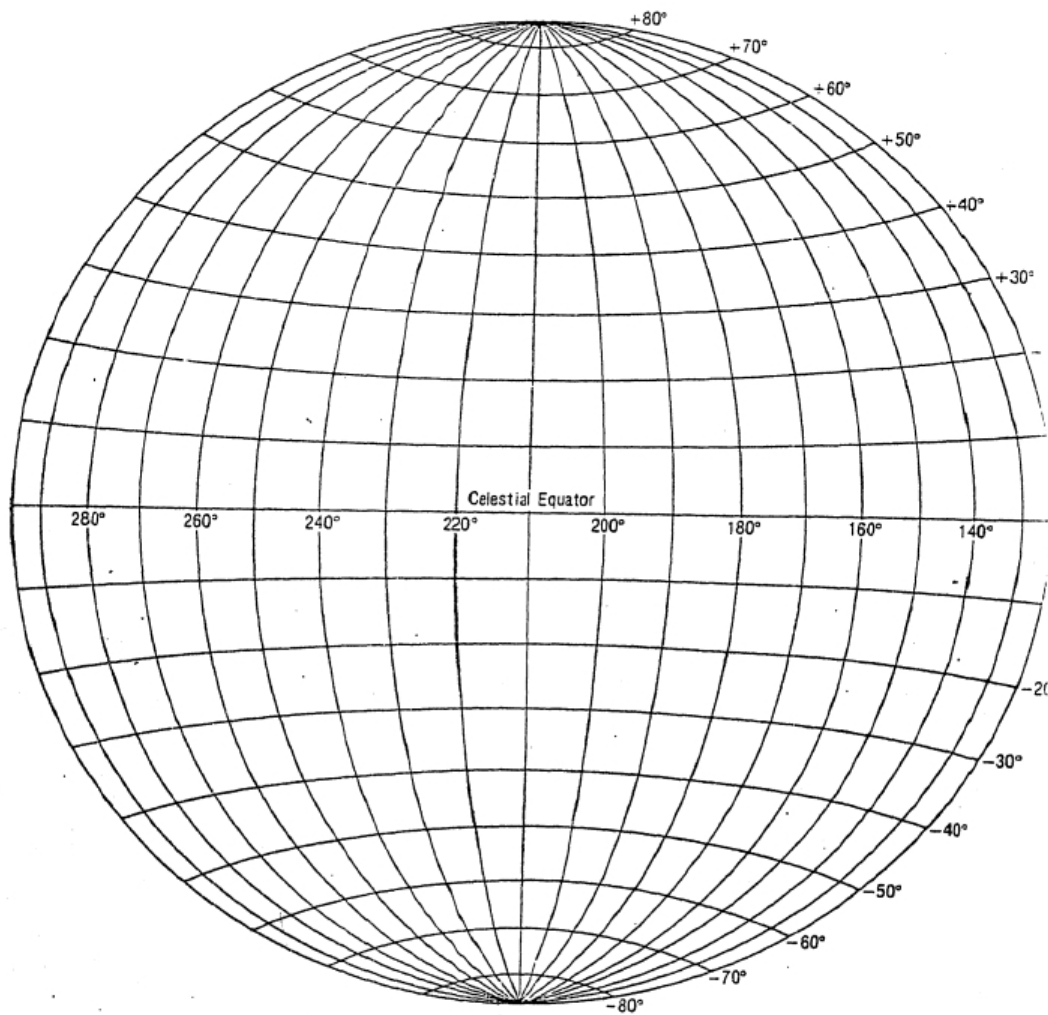

Five two-hour sessions in the Planetarium by Thompson/Kyselka will provide background information on the needed terms, concepts, and movements in the celestial sphere. Cost of training: \$50.00 per hour Planetarium fee. However, since the Bishop Museum views Polynesian voyaging with its domain of research, the fee is waived. Mention is to be made of the Museum's support of such research in pertinent publicity releases.

Crew members are expected to further their own knowledge through such sources as the following: STARS OVER HAWAII, Ed Bryan; STARS, H. L. Rey' NORTH STAR TO SOUTHERN CROSS, Kyselka/Lantermann; TWELVE SKY MAPS, Lantermann/Kyselka; POLYNESIAN STARS AND MEN, Kyselka/Bunton; and the articles BY STARS TO TAHITI, Kyselka/Thompson, and KEALAIKAHIKI, Kyselka/Thompson.

POLYNESIAN VOYAGING SOCIETY

the year of the voyage is here...

Just two short years ago the Polynesian Voyaging Society was formed as a non-profit community group with a grand dream: To reconstruct a modern version of an Ancient Deep Water Voyaging Canoe. Today, with the help of many, that dream is a reality, Hokule'a has been born, dedicated, launched and sailed over 1500 miles. It has been a magnificent learning process for society members. Hokule'a has met her trials, been rescued, refined, rededicated and now stands poised to begin one of the greatest scientific adventures of modern times. Soon Hokule'a will begin the voyage that will take her from Hawaii to Tahiti and back without charts or instruments. In early spring the vessel, crew and supplies must be fully provisioned and ready to sail. Your Membership and/or Donation (tax deductible) will help offset the many expenses of this huge effort.....

JULY

Along the Sun's Path

Emerging in the evening twilight near the setting sun is bright Regulus. But this bright Heart of Leo does not linger long, for it is far to the west and goes to its setting soon after the sun. Regulus and the sun will be together in another month, about August 20th.

Virgo and Libra are high in the west. The heart of Scorpius is at the meridian. Sagittarius and Capricornus are rising, zodiacal constellations far to the south.

About the Meridian

The red-giant-Antares, -Rival-of-Mars- dominates the summer season.

Scorpius is at his best at this time of year, his tail sweeping the southern horizon, and his heart, Antares, shining at the meridian a third of the way to the zenith.

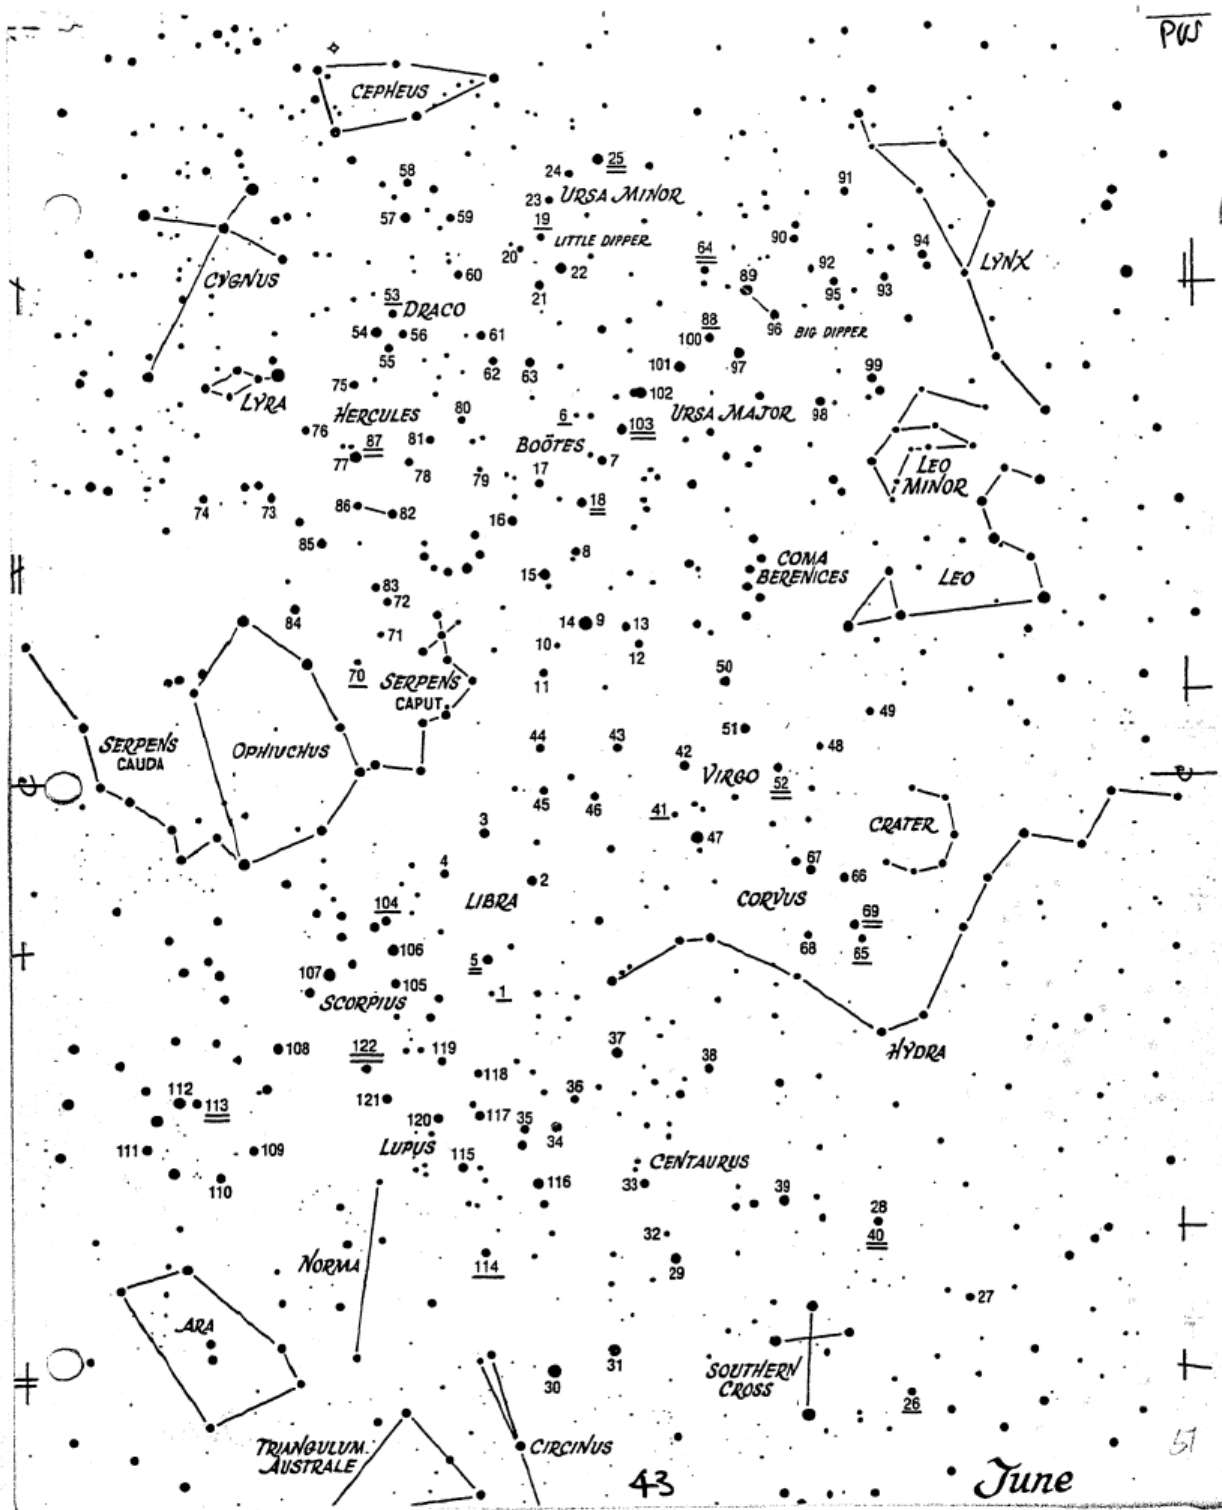

The heads of two giants, Ophiuchus and Hercules, are close to each other as if they're in a top-level conference. Corona Borealis is overhead, its crescent opening toward Hercules and the head of Draco.

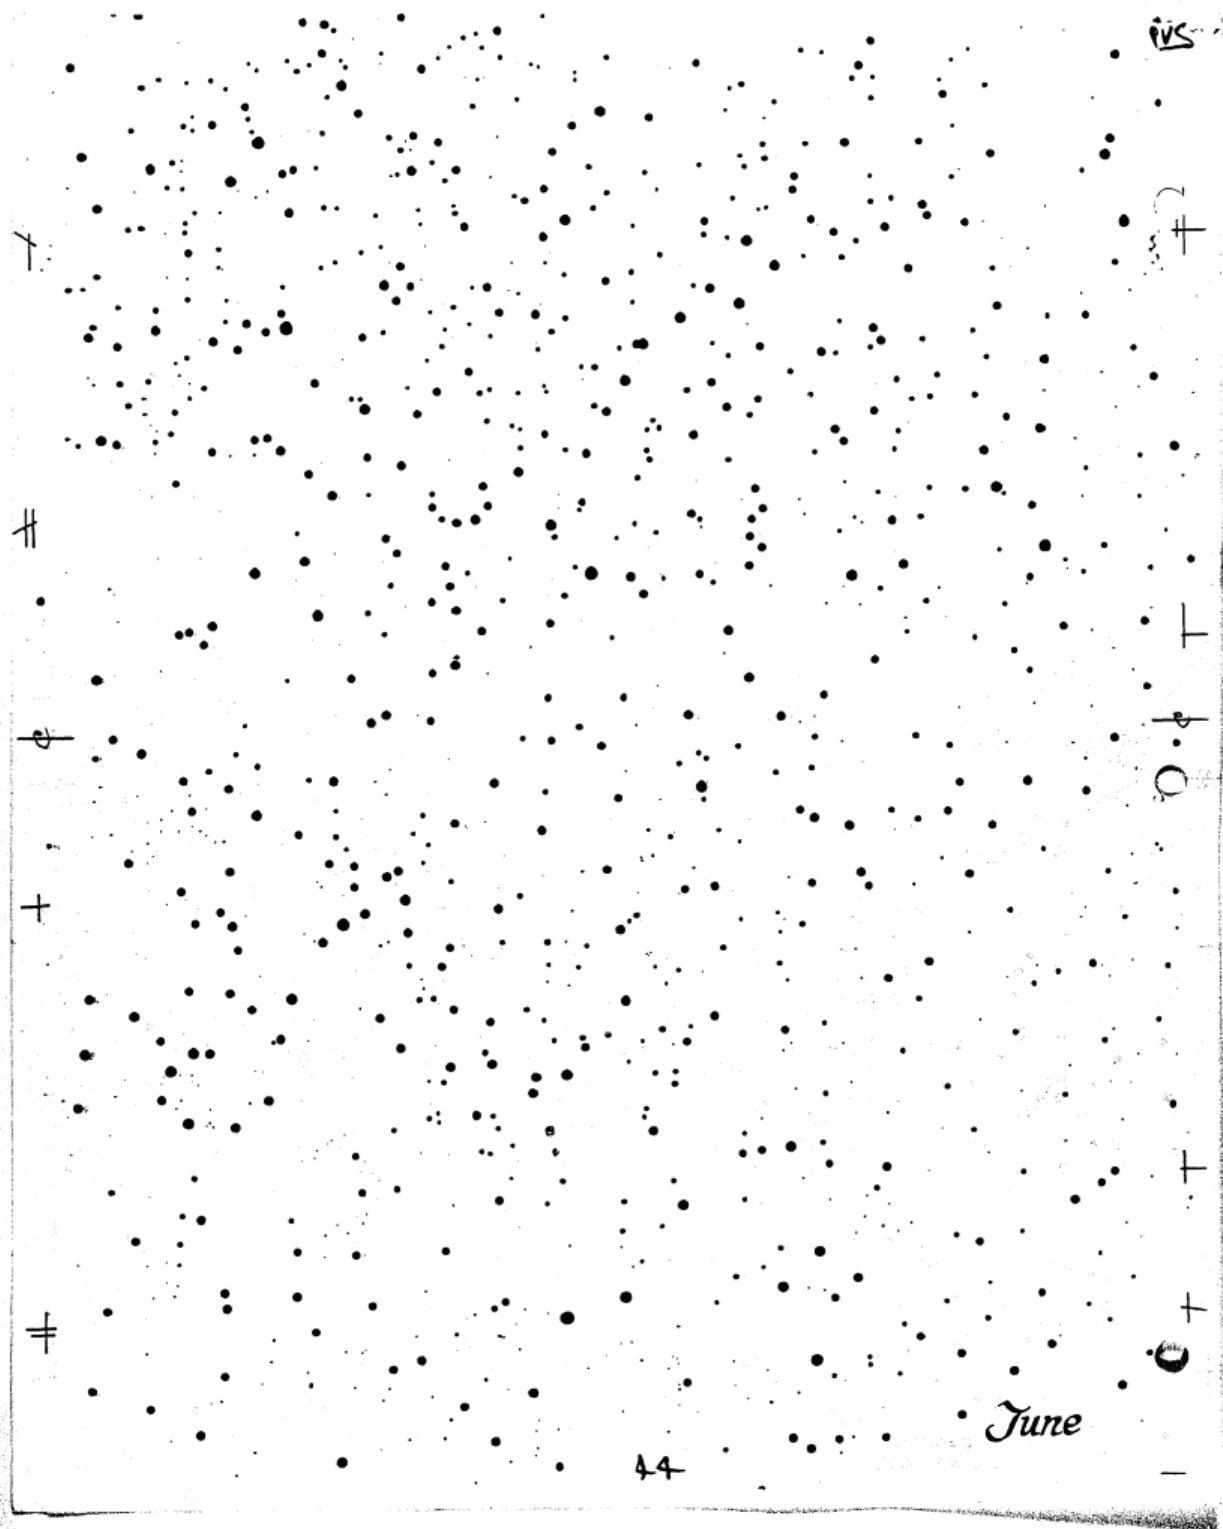

Bootes the Herdsman wanders toward the west marked by the brightest star in the northern hemisphere, Arcturus. The Arcturus-Spica-Antares triangle is prominent in the south. And the Little Dipper hangs downward as far to the south as it goes.

Around the Sky

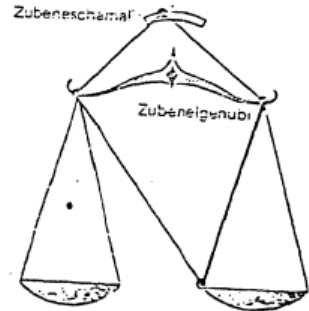

The Big Bear is about to make a four-footed landing on the northwestern horizon. On the opposite side of Polaris from the Big Dipper, Cassiopeia is beginning to rise as a large W-shaped group.

Leo is setting and the Winged Horse is rising. The Summer Triangle of Deneb-Vega-Altair is climbing higher in to the sky, soon to rule the late summer season. The triangle spans the Milky Way, and within that faint band of light flies Cygnus the Swan, southward toward the Scorpion.

JUNE

Along the Sun's Path

The heads of the Twins are just above the place of the setting sun. On the 22nd of June, the sun will be at the feet of Castor at summer solstice.

Cancer is faint. But Regulus, marking Leo's heart, is a brilliant evening object. Huge Virgo follows, then the Scales. Red Antares glows in the southeast, the heart of the Scorpion.

Once the autumnal equinox occurred in Libra, the scales then marking the equality of day and night at that season.

About the Meridian

A great curve unites the North Star to the Southern Cross. The curve sweeps through the handle of the Big Dipper, through Arcturus, then Spica, and down to Crux. But you have to be between the northern tropics and the equator to see both.

Arcturus crosses the meridian early in the evening. Above the head of Serpens is the Crown, opening toward Hercules and the Dragon's head. The Little Dipper stands on the end of its handle while the closest star to the sun, Rigel Kentaurus, reaches the meridian far to the south--61 degrees south of the celestial equator.

Around the Sky

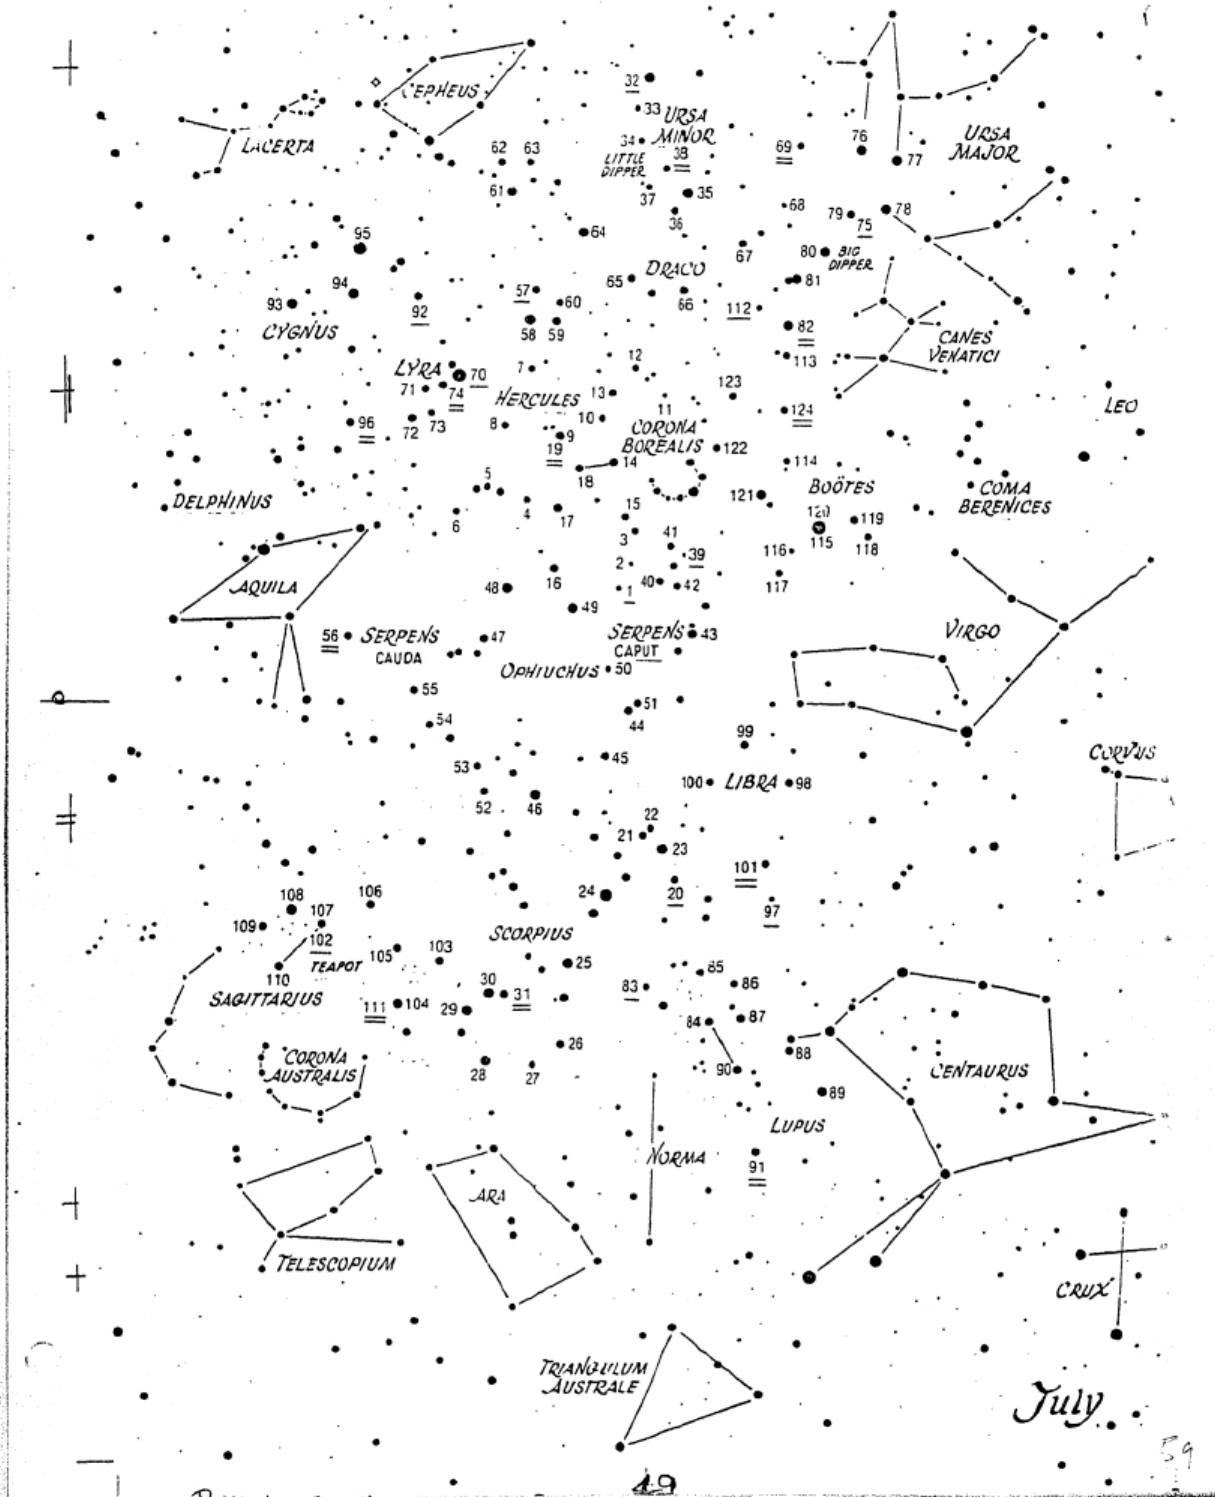

Two big triangles are in the sky. Arcturus and Spica form the base of each. One points toward the setting sun and has Regulus at its point. The other, toward the east, and it has Antares, the heart of Scorpius, at its apex. The heart of a Lion is at one point; the heart of a scorpion at the other, each dominating a season.

The Vega-Deneb-Altair triangle is well above the eastern horizon

NONINSTRUMENTAL NAVIGATION TRAINING PROGRAM

1980 Hawaii-Tahiti Hokule'a Voyage

Nainoa Thompson
Will Kyselka

Polynesian Voyaging Society

February 7, 1979

NONINSTRUMENTAL NAVIGATION TRAINING PROGRAM

Nainoa Thompson

Will Kyselka

February 7, 1979

The crew members of Hokule'a need to know the principles and specifics of holding a particular course set by the navigator. Such competency depends upon a knowledge of the stars as well as the ways of the sea.

Noninstrumental Celestial Navigation

Crew members will become familiar with the terms and concepts relating to the stars.

1. Sidereal compass and the rising and setting places of principal stars.
2. The sun, and its eastward movement among the stars of about one degree a day. The sun's apparent path on the celestial sphere (ecliptic)
3. Relationship of the sun and full moon in the sky relative to the ecliptic.
4. The planets and their motions among the stars and relationship to the ecliptic.
5. Changes in the sky due to daily, annual, and precessional motions.

6. Changes in the azimuths of rising and setting stars with a change in latitude.
7. Steering stars for March through July as well as the stars for backsighting.
8. The solar and sidereal day as well as the synodic and sidereal month.
9. Major zenith stars of Polynesia.
10. Terms: celestial equator, declination, meridian,

Training

Training in the Planetarium and at sea as well as the knowledge to be gained through books will provide crew members the information they need to perform their steering tasks.

Five two-hour sessions in the Planetarium by Thompson/Kyselka will provide background information on the needed terms, concepts, and movements in the celestial sphere. Cost of training: \$50.00 per hour Planetarium fee. However, since the Bishop Museum views Polynesian voyaging with its domain of research, the fee is waived. Mention is to be made of the Museum's support of such research in pertinent publicity releases.

Crew members are expected to further their own knowledge through such sources as the following: STARS OVER HAWAII, Ed Bryan; STARS, H.L. Rey; NORTH STAR TO SOUTHERN CROSS, Kyselka/Lantermann; TWELVE SKY MAPS, Lantermann/Kyselka; POLYNESIAN STARS AND MEN, Kyselka/Bunton; and the articles BY STARS TO TAHITI, Kyselka/Thompson, and KEALAIKAHIKI, Kyselka/Thompson.

The work in the Planetarium will be followed by practical work on land and at sea in star identification and further knowledge of the celestial sphere.

Noninstrumental Navigation at Sea

Here we encounter the problems of holding a course when the steering stars are visible as well as maintaining direction when stars are obscured.

1. Sensing the weather. What signs to look for.
Prediction for days in advance. Checking with weather satellite pictures.
2. A study of swells for direction-keeping.
Indication of open sea swells and identification.
Daytime clues for nighttime steering.
3. Steering--holding a desired course at any given wind direction or condition.
4. Extensive use of steering paddle, sweep, and center sweep.
5. Sail setting for self-steering and changes of sail setting for maximum efficiency.
6. The retaining of knowledge and experience will be done by chant, song, dance.
7. Overnight trips or weekends on Hokule'a will provide opportunity for experiencing the sea and learning the celestial sphere.

February 7, 1979.

Way Finding

Haw to Tahiti: 3000 nm (10,000 km) x 2

Metaphor

Namoa learns; here's Tahiti.

Process of Data / Chart / Overload of Info - stars:

look for patterns / Random scattered ^{groups} ~~stars~~

"For 3 yrs Namoa & I sailed back and forth
between Hawaii & Tahiti in The Museum Planetarium."

We explored the skies widely, searching for ways
that the ancients might have used the stars in
sailing to tiny islands over vast Pacific distances.

Namoa kept detailed records but how could he
remember it all? Orion is rising as the tail
of Canis Major ^{reaches the meridian}. Arcturus is almost at the meridian
when Spica & Hokualea (Arcturus) are rising. With
Arcturus at the meridian Kaph is setting & H is 4°
above the horizon. When Navi sets, the back 2
stars of the False Cross are on the meridian. Gacrux
is rising as Canopus & the Pleiades sets. When
Regulus is at the meridian the False Cross &
So Cross are tilted the same to the horizon.

There is data overload & deduction and
reduction takes place - hard to remember all of
the data. Thus, look for useful things: Patterns
& relationships

(2)

A process of mind & soul.

Not only what is seen above horizon but also what is visualized below the horizon.

Info generated outdoors, in Planetarium

H had Transponder

Nav: Internal = D.R.; everything processed in head. Reference Cae used. Programmed into R.Cae are currents & winds above & below equator.

('76 = 70° int wind objective.)

4° above QP have ITCZ + Eq. Counter Current why pushes vessels east.

Use of land life: Birds; 2 types; expanded land fall - watch for reefs.

Direction during day: Arc. Watch stars in a.m.

ANTARES in front of Scorpion. Ries. Use sun NE swells most of time, SE swell generated below QP. Swell compass. V. of stars & swell.

Point to SE swell - MANU/row.

Navigation at center of \odot . ETAK principle.

Direction: Hawaii, Mangrove, Tuamotu, Tahiti,
Cook Island. Latitude.

Either Island move - vessel still. A way proceeding
info. Metaphor. We know islands don't move.

122 stars memorized.

So Cross 6° above horizon from Hawaii

Earth - Twin - not evening \star

\rightarrow Alpha & Beta Centaurus. N we have Big Dipper
& N \star Corvus the crow Jupiter & Saturn
& H off to left. Mark & Double point
to N \star (21° above horizon in Hawaii)

(Jup brighter). (So Cross 6° bottom - 12° top \star)

Handle to H to Spica (over Sarnad to
So Cross - Hawaii only place that N \star & So Cross
can be seen.

Sirius set w/ Pollux (& Castor) in Tahiti.
What happens as we go north.
